Professional Summary

Final-year Instrumentation Engineering student at STMKG (GPA 3.61) focused on AI, Machine Learning, Climate Technology, and Full Stack development. Experienced in developing Bidirectional LSTM rainfall prediction systems, building modern web applications, and teaching more than 500 students since 2024. Passionate about building intelligent products that solve real-world problems.

Education

Sekolah Tinggi Meteorologi Klimatologi dan Geofisika (STMKG)

B.Eng. Instrumentation Engineering (2022 - Expected 2026)

GPA: 3.61

Featured Projects

Rainfall Monitoring & Prediction System

Bi-LSTM based rainfall forecasting platform using TensorFlow and climate data with an interactive monitoring dashboard.

SKDQuest

Gamified learning platform built with React, TypeScript, and Supabase featuring quizzes, analytics, and progression systems.

IoT Weather Monitoring Platform

ESP32-based weather monitoring and visualization system.

Teaching Experience

Academic Tutor (2024 - Present)

Delivered SKD, UTBK, Mathematics, Physics, and Numerical Reasoning courses across multiple institutions. Mentored 500+ students.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS

AI & ML: TensorFlow, Keras, Scikit-learn, Pandas, NumPy

Frontend: React, Next.js, Tailwind CSS

Backend: Flask, Supabase

Tools: Git, Linux, Jupyter Notebook

Certifications

Cisco CCNAv7: Introduction to Networks (2024)

Cisco CCNA: Switching, Routing, and Wireless Essentials (2025)
